

In this issue:

- Tip of the Month
- Splitted Rope Drum
- JDN Trade Fairs
- Catalogues and Brochures

Tip of the Month

Do you already benefit of the advantages of the applied JDN Toolbox *mini*?

As usual information on this matter can be found under www.jdneuhaus.com.sg.

Splitted Rope Drum

With immediate effect JDN Air Winches Profi Lifter 1200/2000 and Profi Puller 1800/3000 can be optionally delivered with an axially splitted rope drum.

In this case an additional drum flange is mounted in the middle of the rope drum which divides the drum in two parts. This drum flange contains four rope-end fastenings, two for each part, with contrary orientation. So on both parts both spooling directions are possible.

Questions regarding this newsletter may be forwarded to: info@jdn.com.sg

JDN Trade Fairs

From 6th to 9th of November we took part at the China Coal & Mining in Beijing within the German Pavilion together with our daughter company from Singapore.

At the beginning of December the CeMAT India received its premiere and JDN was also present with a very special eye-catcher: The JDN Air Hoist PROFI 100 TI.

JDN at the China Coal & Mining

And at the CeMAT India

Catalogues and Brochures
